

One SM: execution resources and storage

Warp schedulers → execution units

Registers
Indices and intermediate scalars

Register file: 64K × 32-bit registers

Shared memory
Explicit block cooperation

Combined L1 / shared resource: 128 KiB
Shared-memory capacity: up to 100 KiB / SM

L1 / L2 caches
Hardware-managed data reuse

Global memory: geometry, candidate lists, pheromone, tours, working buffers
